

BodySculpt

Tone and Tighten with BodySculpt

BodySculpt is the world's strongest non-invasive procedure to simultaneously build muscle AND burn fat! By using a revolutionary electromagnetic technology BodySculpt is able to induce muscle contractions using its 7-tesla magnet not achievable through exercise.

Just 1x 30 minute session equates to
30 000 sit-ups or squats

BURNING**

**NON-
INVASIVE**

How it works

The continuous expansion and contraction of muscles deeply reshapes the internal structure of the muscle.

It promotes muscle enlargement and increases muscle density and volume for a more toned body.

The contractions simultaneously trigger the release of fatty acids, which leads to the breakdown of fat deposits.

Benefits of Bodysculpting

- builds muscle while reducing fat
- no side effects, painless, completely safe
- only 30 minutes per treatment
- increases metabolism
- results already noticeable after 3/4 weeks

Treatment Areas

Abs, arms, legs (front and back), buttocks and calves.

8 SESSION COURSE

Treatment Protocol

3 to 4 treatments per week for 2 weeks. The treatment duration per area is 30 minutes. One can only do 1 hour per day (2 areas). More treatments can be done if results need improvement.

Studies report 15% – 16% increase in abdominal muscle thickness 4 to 6 weeks after treatment and approximately 19% reduction in subcutaneous fat layer.

For the best results, we recommend 8 Bodysculpt sessions, spaced 2 to 5 days apart. The treatment period would then take place over 2 weeks.

Bodysculpt is intended to supplement an active, healthy lifestyle. It is not a substitute for regular exercise and mindful eating.
